Council Still Gets Offers, For Properly

More Disposed of at Meeting Held Last Monday

After the reading and adoption of the minutes at the council meeting last Monday M.M.R. waited on council in connection with the Alberta Cife. He explained that this property had been sold some time ago and was now being re-possessed by the original owner as the purchaser had not fulfilled his agreement. Mr. Baird suggested that the town disclaim on goods and chattels in the cafe for rent. This action was decided upon by the council, on motion of councillor Lydell and Campane.

A letter was read from C. P. R. official asking for survey of land purchased from the town for a Y north of the station.

Lefts were read from Premier King, Hon. R. B. Bennett, Hon. Chas. Dunning, President Thornton and others, stating they had received letters from the town regarding the completion of the C. N. R. branch line into Redcliff, and that same would receive their attention.

Mayor Worts informed council he had taken the matter of our air mail service up with the Postmaster General but had neither definite yet to report.

Wm. Osborne wrote making an offer for the quarter section of land adjacent to the old shoe factory building which he purchased from the town a short time ago. The offer was accepted on condition that the land be used for additional accommodation for the flying field.

A letter was read from Mr.holm offering \$60.00 for the old Wilkie house. The offer was accepted. On motion of councillors and Champ the price of \$25 was set on house on lots 23 and 24 lock 2. A price of \$75 was placed on shack on First street.

Two offers were made for the building known as the Blue Goose one for \$100 and one for \$450. The latter offer was accepted on motion of councillors Brydell and Champ.

Plans Changed for Skating Rink Here

Will Now Have Open Air Rink on Broadway Corner

At the council meeting last Monday evening the question of the safety of the old garage building on Third street, for skating rink purposes, was discussed. It appeared to be the general opinion that there was a doubt as to whether the building could be made safe without going to more expense than conditions warranted at the present time. It was therefore decided to bring the matter to the attention of the skating rink committee with the suggestion that an open air rink be arranged for this year. This was done and the suggestion has evidently met with the approval of the committee as work has already been started to get the lots on Broadway, previously occupied by the Atlas lumber yard, ready for flooding.

We understand it is the intention to have the lots properly fenced and to provide a suitable building for dressing rooms.

Children's Masquerade Was Great Success

Held in St. Ambrose Parish Hall Last Tuesday Evening

There was a pretty display of fancy costumes at the children's masquerade held in the Parish Hall on Tuesday evening in aid of the Girl Guides' equipment, and a considerable number of parents and others were present as spectators.

The prizes, donated by Mrs. Ballantyne, Mrs. Hicks, Mrs. Wallot and Miss Broadfoot, were awarded as follows, the three last mentioned ladies acting as judges:

Prettiest costume, (girl)—Grace Maskei (Violet).

Most novel, (girl) Opal Lyns (Hawaiian Girl).

Most novel, (boy) Ted Maskei, (Spanish boy).

Best costume, (boy) Ed Champ.

Three extra prizes, given by the judges, were assigned to the following ladies:

Prettiest, Louise Britt, Butterfly.

Most novel, Louise Pitts, Henry, (orange).

Most novel, Russell Mayls (white rabbit).

In several instances the contests were close. Games were played and light refreshments were served, and the party broke up about 10 o'clock.

THIEF ENTERS LEGION CLUB AND TAKES \$74.00

Last Monday night a night prowler entered the Legion club rooms, climbed over the partition into the canteen and stole \$74.00 in bills from the cash box. The general opinion is that it was some one in town who is familiar with the workings of the club. As some of the bills stolen are easily recognizable and as the police have a few clues, it is expected an arrest may be made almost any time.

Mr. Abe Foster of Calgary, formerly of Suffield, was a business visitor in town last week.

Mrs. Gordon Horne and family left this week for their new home in Calgary.

Gordon Henry, the three months old son of Mr. and Mrs. Ole Lien, died suddenly last Sunday morning.

Mrs. Cathcart, who has been in the hospital for the past few weeks, returned last Sunday feeling slightly improved.

Mrs. Geo. Charlton and Mrs. Wm. Creary, of Medicine Hat, spent a few days in town this week visiting Mrs. Fairbairn.

Mrs. Dumais, who has been in the hospital for the past few weeks suffering from a slight indisposition, has returned home.

Mr. and Mrs. Geo. McKay, sr., celebrated the 40th anniversary of their wedding on Thursday. Mrs. McKay was entertained by the Ladies' Aid of Gordon Memorial in honor of the occasion.

St. Mary's Alter Society will hold a shakedown supper from 6:30 till 8:30 o'clock, in Cliff Hall, on Armistice Day, Nov. 11th. After the supper there will be a dance in the same hall. Admission to supper 50c, and to the dance \$1.00, come, extra lady 35c. Lunch will be served at midnight.

Promising Outlook At Suffield Oil Well

Big Things Are Expected To Happen Any Time Now

According to reports, big things are expected to happen any time now at the oil well being drilled north-east of Suffield and north-west of here. Officials and drillers at the well all appear confident of striking a real flow of oil very shortly.

Mr. Gordo Campy, who was the first owner of the well in Montana, from which \$30,000,000 worth of oil was produced, located the well in the Suffield field, because of the similarity of the formation.

Mr. Foster, who has had charge of drilling operations, since they commenced in May, 1928, has had the usual number of all drilling outfits but has kept on going until now. It takes as though his untiring efforts are to be rewarded. In drilling this well gas pockets were encountered from 1,100 feet and came in increasing quantity.

Oil showing started coming at around 1,900 feet and at 3,087 feet the strait sand was encountered, resulting in oil. The drill is now being pushed through the black lines of the Ellis formation which is the producing sand in the Kevin-Sunbird field. It is the opinion of Mr. Campbell that he had never seen a situation similar to the Suffield well which had not resulted in real production.

Should this well develop as conditions now indicate, it should mean that this district will soon be getting on the oil map as the company behind the Suffield well have filed on 33,000 acres of land in this part.

New Officers Are Nominated at Legion

All But The Vice President Are Elected By Acclamation

At the meeting of the local Legion held last Sunday the following officers were nominated for the coming year:

For President—Bert Allison.
For Vice Pres.—C. Newham and Bert Shaw.

For Executive—B. Sheldon, A. Holman, E. McKinnon, H. J. Cook and D. McLachlan.

As there was only one nominee for the president, Mr. Allison will become the next president by acclamation. The executive will be elected in the same way, as only the required number were nominated. The only contest will be for vice president. The voting for this officer will take place at the regular monthly meeting in November.

Harvest Service Was Held at Terra Nova

The little district school at Terra Nova was filled last Sunday afternoon for the annual Harvest Thanksgiving service. The view of Redcliff procured from 1 Samuel 6-13: "They of Beth-Shemesh were reaping and they lifted up their eyes and saw the Ark, and rejoiced to see it: (God's presence following the harvest increase)."

There was a good collection for Diocesan missions and a varied assortment of offerings in kind was handed to the vicar.

Mr. and Mrs. R. C. Hargrave were visitors in Winnipeg for a few days last week.

"White Empresses" to Call at Honolulu.

Honolulu, famous for its lovely Hawaiian dancers, its splendidly-plunged swimmers, wreaths of flowers, Waikiki Beach and lovely Diamond Head

Annual Meeting of Local Bible Society

Officers Elected and Arrangement Made For Canvass

The annual meeting of the local Bible Society was held on Tuesday evening. Rev. A. A. Lydell, Field Secretary of the Society, was present and gave an illustrated talk on the work of the society in many lands. It was a very interesting and informative account of what is being done by this worldwide organization. At the business part of the meeting the officers were re-elected as follows:

Hon. Pres.—Wm. Henderson.
Pres.—J. M. Stratton.
Secretary—Mrs. Conn.

It was decided that the annual canvass begins on Monday, Oct. 21st. Last year Redcliff contributed \$35.00 and it was hoped to increase that amount this year.

Home Cooking Contest At Legion Carnival

Carnival To Be Officially Opened by Mayor on Oct. 23rd

The local Legion carnival will be officially opened on Wednesday afternoon, Oct. 23rd at 2:30, by Mayor Worts.

A tenture which has been added to the program should be of interest to the ladies of town and surrounding district. It is a home cooking contest in which women are asked to enter. The cooking will be judged by experts in this line and three prizes will be offered for the best collection of home cooking shown. This competition should prove most interesting, as well as furnishing an opportunity for the women to help make the carnival a success.

Prizes will be given for the best bread, best light cakes and the best fancy cooking.

Churches

ST. AMBROSE CHURCH
Rev. J. L. Cooper

21st Sunday after Trinity (Children's Day)
Holy Communion at 8 a.m.
Morning and noon 11 a.m.
Children's Day special service and address 3 p.m.
Evening and sermon at 7:30
Friday, Oct. 25th Children's choir practice after school. Even song 7:30 followed by choir practice.

GOLDEN MEMORIAL UNITED CHURCH
Rev. W. B. Smith, Pastor

Sunday, October 20th, 1929.
10 a.m. Church School.
11:15 Morning worship. The sacrament of the Lord's Supper will be celebrated.
7:30 Evening worship, subject "I Believe in God."

CHURCH OF THE BAPTIST
Rev. Mr. M. H. M. M. M.
Celebration of Mass, Second and Fourth Sundays of each month at 6:30 a.m.

BLUE RIBBON COFFEE

Packed in vacuum tins to preserve aroma and flavour. Get a tin and try it.

Britain and Canada

Canada is honored at the present time by having among its visitors three notable British statesmen. Hon. J. H. Thomas, Minister of Employment in the Ramsay MacDonald Government; Hon. Winston B. Churchill, former Chancellor of the Exchequer; and Mr. Amery, former Minister for the Dominions. Mr. Churchill and Mr. Amery are in Canada on holiday, but they are none the less closely studying conditions and ascertaining the sentiment of the country in regard to vital questions of Empire policy such as immigration, trade and commerce and the possibilities of closer relationships in matters for the general advancement of both Mother Country and this Dominion.

On the other hand, Mr. Thomas' visit to Canada is made in his official capacity as Minister of Employment with the object of endeavoring to find out in what ways Canada can assist in solving the serious unemployment problem in Britain without doing injury to itself, having discovered, or evolved, ways and means to accomplish this object, to secure the co-operation of the Canadian Government and the Canadian people in carrying them into effect.

Fortunately, the first impression created by Mr. Thomas' mission has been removed. As the minister charged with the task of solving the unemployment problem in Britain, it was felt that Mr. Thomas was coming to Canada with the object of investigating the immigration policy whereby large numbers if British unemployed would be transferred to this Dominion. Anxious as Canada may be to have a large proportion of its incoming recruits of British birth, this Dominion is not prepared to have thousands of men dumped into this country because they cannot find work at home and who have no training or aptitude for life in this land. Mr. Thomas has made it abundantly clear that he has no such intention; on the contrary, Mr. Thomas declares that he will not make any unemployment problem by creating one for you. Unemployment and immigration are, he says, two quite separate and distinct problems and should be tackled as such.

Then what is Mr. Thomas' proposal to Canada? It is simple, clear, workable, and one that should find favor with, and the sympathetic support of the people of Canada. In a word it is that our large Canadian corporations, and our people generally, should, when making purchases buy British-made goods and articles, if such are not made in Canada, in preference to buying from any other country. He has asked the Dominion Government to give encouragement and support to such a policy. He has sat down in conference with the heads of the Canadian Pacific and Canadian National Railways and asked them to follow such a policy. He has said to the officials of the Canadian Wheat Board: "Britain is the largest purchaser of your wheat. We are your best customer, just as we are Canada's best customer. Thus, when you require machinery or other things which Canada itself does not manufacture and cannot supply, we ask you to buy from us, rather than from others."

This should appeal to the people of Canada as good business. It is a self-respecting proposal for both parties to it. For example, Mr. Thomas points out that Canada imports over 14,000,000 tons of coal from the United States. He wants, and says he is going to get, some of that coal business for Britain—Canada's best customer—and thereby assist the coal-mining industry of the Old Land and supply work for some of the thousands of unemployed miners there, as well as cargoes for British boats, thus providing employment for British dock hands, sailors, and all and sundry having to do with the business of shipping.

Such a policy will elicit a responsive chord with the people of Western Canada, who are not particularly favorable to any policy of restrictive tariffs, or other forms of restraint on trade, and who firmly believe that the proper attitude for this Dominion is to meet tariff action by other countries against Britain by further reducing tariffs on British goods and thereby assisting to substitute British-made goods for those of other countries.

The success of such a policy lies largely with the individual Canadian citizen. He can make it a success by stipulating when making any purchase, that, first, he must have an article made in Canada, and, if that cannot be obtained, second that it be British-made. Importers, wholesalers, distributors, retailers, will quickly adjust their stocks to comply with the popular demand.

Leaving all sentiment aside, it is good business for the people of Canada to support and buy from their best customer. The more we buy from Britain, the more Britain can afford to buy from us.

Silver Dollar Out Of Date

Fifty Million In U.S. Treasury But No Demand For Them

The silver dollar has joined the horse and buggy and other remnants of the past and has faded from circulation, while the silver half-dollar is still used in the United States. At the present time there are about 50,000,000 silver dollars tied up in the Treasury to back up the

certification, although they could easily be placed in circulation if there were a demand for them.

New Car For King George

Has Six Wheels and Will Travel Over Roughest Roads

A six-wheeled motor car has been built for the King, at Sandringham, England. It is an entirely new production designed to travel over the roughest moors and broken ground and even over ploughed land, while it can travel at 50 miles an hour on the open road. The car has detachable rubber caterpillar treads for really rough ground.

The proposed canal across Nicaragua, to link the Atlantic and Pacific, would be bigger than the Panama Canal.

A new type of lifeboat, recently tested in British waters, holds 200 passengers and is equipped with radio.

Any job is easy when you like it and hard when you dislike it.

Was Victim Of Glacier

Body Of Austrian Recovered After Eighty-Three Years

Eighty-three years ago, Norbert Mattersberger, at the time 32 years old, husband of Magda, and father of Franz Otto, failed to return to his cottage, in the village of Kals, Austria, one day from the woods, where he was on his living hunting guns. A rescue party from the village decided he had been caught in an avalanche of ice.

Recently Mattersberger came home just as he left that day in 1846. The glacier had given up its prey. Although clean shaven, according to family records, when he left, he had a two-inch beard when a party of hunters found him on the edge of the glacier. The body, clothes, and weapons were in a perfect state of preservation.

Franz Mattersberger is now 86. His father was buried at Kals, while grandchildren and great-grandchildren mourned at his grave.

WHAT OUR GIRLS NEED

When Languid, Anemic and Feeling Run Down

When a girl grows languid, dull and irritable, when she looks faded and she becomes pale, you may be sure that the cause is anemia, or debilitated blood. The blood, the color of the blood is caused by the presence in it of millions of tiny red corpuscles. It is these tiny bodies that carry nourishment from the blood to the tissues. They also carry the food of health in checks and lips. When a girl's blood is deficient in these red corpuscles her body is under-nourished, her nerve system is there is serious danger of a decline. What is needed is an improvement in the quality of the blood, and it is a scientific fact that the course of Dr. Williams' Pink Pills will not enrich and purify the blood, but it will increase the number of red corpuscles and thus improve the blood.

When a girl is anemic and is accompanied by weakness will disappear. In fact, she had fully regained her former good health. I would advise you to get a box of Dr. Williams' Pink Pills at once. My daughter was in a badly run-down condition, nervous, nervous and much under weight. We tried several medicines, but they did not do her any good. I decided to give her Dr. Williams' Pink Pills. Almost from the start she began to improve, and after ten days of a few boxes of Dr. Williams' Pink Pills, her appetite improved and she had a better color in her cheeks. In fact, she had fully regained her former good health. I would advise you to get a box of Dr. Williams' Pink Pills at once. My daughter was in a badly run-down condition, nervous, nervous and much under weight. We tried several medicines, but they did not do her any good. I decided to give her Dr. Williams' Pink Pills. Almost from the start she began to improve, and after ten days of a few boxes of Dr. Williams' Pink Pills, her appetite improved and she had a better color in her cheeks. You can get these pills from any drug store or by mail from Dr. Williams' Medicine Co., Brockville, Ont.

World Harvest Larger

Wheat Average of Many Countries Increased In Last Year

Present indications are that the world average of wheat to be harvested this year will be larger than that of last year. The 1929 wheat average in 21 countries is estimated to be five million bushels larger than in 1928. Areas reported in all European countries total 561,352,000 acres, an increase of 1.4 per cent over last year.

Worms in children work havoc. These parasites in the tender lining of the intestines and if left to pursue their ravages undisturbed, will ultimately perforate the wall, because these worms are of the hook variety that cling to and feed upon the interior surface. Miller's Worm Powder will get out any worms, and these worms, of whatever variety, will serve to repair the injury they have done.

Chinese writers state that in the third century B.C., China had wide highways lined with shade trees spaced at intervals of thirty feet.

An Indian spider's web, only six inches wide, was found to contain over 41,000 meshes.

Cramps

Diarrhoea

Pains in Stomach

Mr. Roy Lightbail, Milford, Ont., says: "I purchased a bottle of Dr. Fowler's Extol of Strawberry and before I had taken half of it I was completely relieved. I have never had cramps, diarrhoea, and severe pains in my stomach."

Wonderful Discovery

Of German Experts

Treatment Given To Living Trees Makes Lumber Purely Fireproof

A this mineral soup, fed to living trees to make their wood partly fireproof after it has been cut and made into boards, has been invented by experts of the College of Forestry, at Tharandt, Germany. The process is a modification of one invented some time ago to dye the wood of a living tree to any desired colour. For this purpose solutions of the desired dyes were placed in holes bored in the tree close to the ground. As the sap rose the dye went with it, gradually coloring the wood. In the new fireproofing process, the dye solution is replaced by a bowl of the new "soup" containing compounds of silicon and fluorine and other chemical elements, so arranged that the solution flows into the holes and carries up by the rising sap into every fibre of the wood. The solution is too diluted to damage the living cells of the tree. Instead, the chemicals are gradually converted into mineral deposits throughout the wood, such as happens in the course of millions of years to wood buried in mineralized ground and slowly turned into stone. To carry this mineralizing process too far in the trees intended for lumber is unwise, since the mineral deposits make the wood harder to saw. The German experts claim to have succeeded, however, in mineralizing trees just enough to make the wood almost fireproof, without destroying its properties as wood.

Might Be Good Idea

Everyone In Japan Compelled To Carry Identification Disc

"Where's your identification disc?" In the near future you may be stopped by a policeman and asked this question. And if you can't produce the disc, it may mean a police court summons and a fine says a writer in Answers. This may sound far-fetched, but a coroner remarked the other day that it would be a good thing if everybody carried an identification disc of some kind, and was informed by a police officer that this was compulsory in Japan. There everyone wears such a disc around the neck from birth onwards. Apart from convenience in accident cases, it would also be a safeguard against loss of memory, of which there have been many instances.

Two Diplomats Honored

Several Canadians Also Received Honorary Degree At Dalhousie University

America's minister to Canada, Hon. William Phillips, and Canada's minister to the United States, Hon. Charles Stewart, were among those receiving honorary degrees at Dalhousie University's reunion convocation. Other distinguished men to be honored were Hon. E. N. Rhodes, P.C., Premier of Nova Scotia; Hon. A. R. MacLean, president of the Exchequer Court of Canada; Col. the Hon. J. L. Ralston, Minister of National Defence and Chief Justice A. M. Morrison, of the Supreme Court of British Columbia.

Mother Grave's Worm Exterminator will drive worms from the system without injury to the child, because it is action, while fully effective is mild.

Growth of Canada

Member Of New York Stock Exchange Sees Great Future For This Dominion

In a recent talk of their monthly survey, a well known financial house, members of the New York Stock Exchange, state in part:

"Canada has been called one of the most fortunately situated countries in the world. Possibly the chief cause of this is to be seen in the steady growth during the past several years in agriculture, mining, forestry, power, railway earnings, foreign trade, bank deposits and in the maintenance of a high standard of living at a low cost. The gains in industry and trade are in many respects comparable to developments in the United States at the turn of the century.

"Guesswork regarding the future development of Canada, may be said to be in the United States, far short of the actual facts. The general impression that Canada is capable of development, even on a narrow strip is not tenable. Northern Canada is an amazing country in future wealth. Gold and silver, copper, timber and great deposits of extensive, and the territory subject to future development is vast. The country is now so far from settlement, but it is far from adequate development.

"Although the population of Canada is still under 10,000,000, it maintains a high place among the leading commercial nations. No country exports a greater amount of wheat, newspaper paper, nickel and asbestos. In the export of wheat four Canada holds second place and is third among the nations in the export of wood pulp. In addition, a high position is occupied in the export of such staple products as meat products, cattle, hides and leather products, raw fur, copper, gold, lead, etc."

A Never Ending Task

Tiny Tree Creeper Works All Day and Every Day

It is most interesting to watch a tiny creeper at work. One of these birds was noticed by a naturalist some time ago, working on a great old elm, half smothered by strangling ivy. This tiny bird usually begins its performance at the bottom of a tree, creeping round and round like a spider. The round-about journey is made in short, jerky movements, with constant stops to pick out insects from the bark of the bark. The one under view completed its spiral ascent in about two minutes. During the time obtained would be rather a difficult task because some of them are so small to be seen without the aid of a magnifying glass. On arriving at the top the adroit climber slid down to another tree and commenced climbing again. It is a never-ending task, but performed almost in silence. It appears to climb all day long and every day.

Satisfied With Treaty

Premier Mahmoud Pasha, of Egypt, recently returned from London, addressing 7,000 Egyptians at Alexandria, said that the new Anglo-Egyptian Treaty allied the 23 years of mutual misunderstandings and suspicions between Egypt and Great Britain. He prophesied that Britain in a few years would remove entirely her troops from the Suez Canal.

Then there was the tactical hotel manager who removed the sign "Have you forgotten anything?" from every room of his hotel during the week of the Plumbers' Convention.

A bookmaker charged with hitting a policeman, said that he did not know that it was a policeman. Few bookmakers bother to test officers by hitting them.

"It is a comic!"
"Yes."
"Married?"
"Yes."
"Then you are a tragic-comic!"
Hummel, Hamberg.

How Fashions Change

Bizarre Costumes Affected By the Great People of Every Year Ago

At the opening of the Victoria Fair last long ago, Premier "Olmstead" called on the first fair held there, 68 years before. The ladies then wore crinolines, little parasols, neat bonnets tied under the chin with a ribbon, and pinky little parrots were held respectfully over the shoulder. Their movements were graceful and charming. If they hurried, the frolicked edge of a pantafoote flashed for a moment upon a dainty ankle.

The men's costumes were also bizarre. It was the halcyon age which gave the world the stove-pipe hat—a real stove-pipe shape with narrow edge. Full beard and whiskers were in vogue, for Mr. Gillette did not yet bring his gift to mankind. Some of the young bucks shaved the chin, but made up for this makeshift by swooping down the neck. High, stiff collars or stocks surmounted twelve yards of gaudy colour; coats were mainly black, but often a bright blue or crimson, with large brass buttons. Gentlemen's pants were pulled up by a single strap, and were, up high, also fastened under the instep.

Nowadays the Victoria fair grounds are crowded with as such articles. We are more modest. Maidens with wind-blown, blue hats, no stockings, a few strands of hair, and a wrist watch wander about among the showrooms accompanied by youths in collared, sleeveless shirts. Jazz jumpers, acres of violently checked plaid pants and hose that look as if lightning had struck the wool still life, to some extent proved.

Fashions change, but the wind-blown bobs and the jazz jumpers are still in vogue. In the case of the fat lady, the tattooed man, the human midgits, the sword-avengers, and the fortune-tellers are still in vogue. Wind-blown bobs and the jazz jumpers are still in vogue. In the case of the fat lady, the tattooed man, the human midgits, the sword-avengers, and the fortune-tellers are still in vogue.

Superstition Is Common

Nearly Every Person Has Ideas

About good and bad luck. Dr. Henry Beeke, an Oxford Don, is responsible for this idea. It is a curious fact that incense was "invented" by an Oxford Don. Dr. Henry Beeke, a fellow of Oriel College, who afterwards became Dean of Bristol. Beeke was Professor of Modern History at Oxford, though his real forte was finance, and he frequently visited Vanuatu at that statesman's long tenure of the Chancellorship of the Exchequer. Disgruntled taxpayers will learn with grim satisfaction that Dr. Beeke was a Tory, and he died in exile at Torquay, which had fed his refuge from the "Bristol riot" at the time of the first Reform Bill.

Gypsum Industry Growing

The continued activity in the building trades throughout the whole of Canada finds reflection in the demand for gypsum building materials and in consequence the gypsum industry in Canada is showing excellent progress.

She.—The world is full of rascals. This morning the new woman gave me a counterfeit half dollar.
He.—How is it, my dear?
She.—Oh, I've already got rid of it. Luckily the butcher took it.

Miners In Northern Saskatchewan

Diamond drills will soon be working on the Mammoth group of claims in Northern Saskatchewan. It is reported that the major portion of the equipment has already been moved onto the property which has been mentioned by Consolidated Mines. The Mammoth group is situated about 35 miles northwest of Treaty Mission on the Churchill River.

Visitor—Where did you get that fur coat?

—Hawes—I got it in a swimming contest—we had to swim across the lake, and I did it in three hours and a half.

Visitor—You poor dear, I only wait for three minutes and my husband bought me a complete set of furs!

NEW BOARD OF GRAIN COMMISSIONERS

The photographs here show the new Board of Grain Commissioners just appointed. They are: 1) Hon. Charles Magill Hamilton, former minister of agriculture for province of Saskatchewan; 2) E. B. Hamy, chairman, general manager of Canadian Wheat Pool, with headquarters at Winnipeg; and 3) Prof. Duncan A. MacGibbon, professor of political economy of University of Alberta, and outstanding economist in western Canada, graduate in arts at McMaster University.

Doctors Say Canned Food Is Wholesome

Research Shows It To Be As Good As When Fresh

In the minds of many people there is an old-established prejudice, to some extent fostered in the past by the medical profession, against the consumption of tinned foods, on the ground that they may be productive of some form of pneumonia or microbe poisoning. As a matter of fact, there is really no risk at all. More recent medical opinion has emphatically and authoritatively declared, after exhaustive research, that, whatever may once have been the case, modern methods of canning are so perfect that tinned foods prepared by reputable firms are now absolutely above suspicion, and, moreover, that they contain at least as large a proportion of the necessary vitamins as the same food when fresh and unprocessed. The case for tinned foods as wholesome and nutritive articles of diet is, in fact, definitely established.

Originated Income Tax

Dr. Henry Beeke, An Oxford Don, Is Responsible For Idea

It is a curious fact that incense was "invented" by an Oxford Don. Dr. Henry Beeke, a fellow of Oriel College, who afterwards became Dean of Bristol. Beeke was Professor of Modern History at Oxford, though his real forte was finance, and he frequently visited Vanuatu at that statesman's long tenure of the Chancellorship of the Exchequer. Disgruntled taxpayers will learn with grim satisfaction that Dr. Beeke was a Tory, and he died in exile at Torquay, which had fed his refuge from the "Bristol riot" at the time of the first Reform Bill.

May Sell Great Zeppelin

The Zeppelin works in Germany. It is reported, are willing to sell the Great Zeppelin, if the price offered seems to have been taken to console you. You turn aside, in a corridor not far from the Sculpture Gallery, and there through a glass-paneled door, screened by a grating. Within is a great chamber, exquisitely decorated, but, at a first glance, without any sign of hooks. The books are there, however—tens of thousands of priceless volumes—but all in closed cases and cabinets beautifully painted to harmonize with the general scheme of decoration.

Animals As Swimmers

The animals which fall as swimmers, we are told, are camels, giraffes, lamas, monkeys and kangaroos, but the first two can manage, if their balance is preserved by a boat. Monkeys are often fond of paddling. Kangaroos jump about in the water and will drown a batter if they can by leaping on him. Contrary to the tradition of centuries, pigs are at home in the water, and in times of flood have been known to swim for miles. Among the land animals the tiger stands out as a first-class swimmer.

How To Follow

The cabbies were having their sandwiches at lunch time. Said the first, "there's one thing about you, Albert, you have always thought was rather odd."

"O, said his friend.

"You continued the other. 'You always lounge about on your back on the right side. Why don't you give 'em one on the left side now and again for a change?'

"I damn," replied his friend. "But it don't matter much, anyway. As long as I get one side against the other's pretty sure for teller!"

In one of London's hospitals last year 127 miles of bandages were used.

Fetes Golden Wedding

Captain James W. Troup, manager of Canadian Pacific British Columbia Coastal service, last month celebrated at one and the same time his golden wedding and the semi-centenary of his debut in British Columbia navigation. He is the eldest of three surviving sons of Captain W. H. Troup who commanded ships between Panama and San Francisco in the fifties and sixties. James W. Troup was the first white man to navigate the Cascade Rapids, and having sailed every position on shipboard before he was known every mile of the British Columbia coast. Photographs of late of him and Mrs. Troup in the gardens of their home in Victoria.

A Job For England

Without Her Help United States Of Europe Will Not Materialize

There are many immediate obstacles to the United States of Europe—nationalism, for example, then which nothing is more alien to the Græco-Roman heritage—but ultimately there is only one obstacle, the antagonism between France and Germany. These two powers have not. It seems, enough inner strength to overcome this obstacle. But with the help of England, who is free from any such antagonism, they can overcome it. There is only one way this help can be given, but it is a very simple way—by being a friend to each side and not more to one than to the other. This, of itself, should end the antagonism between them; for the one, with England as a friend, will not fear the other, and the other will not dare to assault the one with England as a friend. The United States of Europe will come into England's hands or they will not come at all.—Manchester Guardian.

Famous Victim Library

Books Are Concentrated In Closed Cases and Cabinets

A curious feature of the Vatican Library, in the custody of which Cardinal Gasquet succeeds the late Cardinal Guerin, is the pains which seem to have been taken to conceal you. You turn aside, in a corridor not far from the Sculpture Gallery, and there through a glass-paneled door, screened by a grating. Within is a great chamber, exquisitely decorated, but, at a first glance, without any sign of hooks. The books are there, however—tens of thousands of priceless volumes—but all in closed cases and cabinets beautifully painted to harmonize with the general scheme of decoration.

Will Hardly Be Successful

Seamen Trying To Revive Popular Use of Kitt

Patriotic Seamen are reviving an old-time plea for popularization of the kitt on the ground of comfort and economy. The kitt, or the kitt, is a fish spear, claims to have worn the same kitt off and on for 30 years, and he declares it looks as fresh as ever. Other contributors assert that the kitt will outlast many pairs of trousers, and the chief objections of opponents are confined to the difficulty of finding suitable headgear—straw hats, dentures, silk hats and boots being unsuitable for the purpose. No one seems to have risen in defence of the kitt, the appropriate headgear with the High-top hat, and yet it comes nearest in scantiness of material to the fashion in which youths are trying to keep their shirts off. Kitt is hardly expected that the champion of the kitt will gain such support outside their own circles. As an everyday dress, the kitt has outworn its life, except as a regimental picture and a relic of the steam engine, the automobile and the aeroplane began to bridge distances and to ignore out of travel the kitt had claims which could not be denied.—Christian Science Monitor.

Shipping Crates For Hogs

Method Of Constructing a Strong and Rigid Crate

The experimental farms ship out a great many hogs for breeding purposes, using individual crates in most cases. In his report for 1923, published by the Department of Agriculture, at Ottawa, the Dominion Animal Husbandman describes the method of constructing a strong and rigid crate that is light in weight. The size of the crate for hogs of different weights are: for hogs up to 75 pounds, 8 inches wide, 2 feet long, and 2 feet 10 inches high; from 75 to 100 pounds the dimensions have to be increased to 10 inches in width 2 feet 2 inches in height, and 3 feet in length. Hogs from 100 to 150 pounds require a crate 1 foot wide, 3 feet 6 inches high, and 3 feet in length. From 150 to 200 pounds the width should be 1 foot 2 inches, the height 2 feet 6 inches, and length 4 feet.

In constructing a crate it is first necessary to nail the floor firmly into the two floor slats. Then assemble each side and attach as a quarter inch nail in one end. The other end should consist of a removable gate 4 inches wide. Cross pieces should be placed across the top binding the two sides together. Spruce or pine is satisfactory wood to use. The floor slats should be 2 inches square and of the required length, and the lower slats on each side and on the end should be 2 inches wide. The floor slats should be 2 inches wide. The spacing between the side slats should not exceed 2 1/2 inches. These are the dimensions for two uprights, or to the large crate a third may be placed in the centre.

The crate may be constructed entirely of material five-eighths of an inch in thickness, but for the lower slats on each side wider boards up to 4 inches may be used, according to the experience of the Dominion Animal Husbandman.

Grading Floor For Britain

Marketing Under Restrictive Marks Would Increase Demand Is Opinion

The market board of the Massachusetts Department of Agriculture is advised that in the opinion of millers, bakers and others concerned in the manufacture and distribution of flour in Great Britain, the definition of national standards of quality, and the marketing of supplies, of standard qualities under distinctive marks would improve the demand for English wheat flour.

It is proposed, therefore, to introduce a scheme for the voluntary grading and marketing of English wheat flour under the Agricultural Products Act, 1928. The national mark will also be used with a grade of standard quality and a trade committee consisting of growers, manufacturers and distributors has been appointed to advise the Department for Great Britain.

A registered packer (miller) must show his business premises and all equipment and records inspected at any reasonable time by any officer appointed by the minister of agriculture, and who is authorized to enter the premises. Flour of a grade is being milled or packed, must allow such officer to be present and grading and wheat going forward to be milled. The scheme will come into operation on October 1, 1929.

Filing Interior Of Buckingham Palace

Will Be Used For Picture Dealing With Royal Family

Huge are the plans, and all the paraphernalia of the moving picture have at last invaded Buckingham Palace, and the royal kitchen. In history, interior scenes are being filmed, says the London Daily Sketch. These will be used for a moving picture dealing with the empire trade.

The film will depict a small boy who is taken by a fairy prince to the king's palace. The royal chef is seen stirring a gigantic Christmas pudding, many entries of the royal kitchen, and the royal kitchen. Work on the film is still in progress inside the palace.

Pictures will be taken shortly inside the magnificent gold and scarlet throne room and the other state apartments. When the film is released to the public will have its first opportunity of seeing the interior of the state apartments.

Almost the only section of the palace which will not appear in the film are the private apartments of the king and queen.

Special permission was given by the King for a British film dealing with the empire (first trade) to be made inside the palace during the absence of the court at Sandringham. When the journey to Norfolk was postponed, however, the king desired that the filming should proceed, according to arrangements.

World's Loftiest Capital

Bolivian City Built On Mountains 12,470 Feet Above Sea

La Paz, Bolivia, where the people are demonstrating against Paraguay, is the loftiest capital in the world, for it stands on a mountain top 12,470 feet above sea level. This is 2,000 feet higher than Quito, Ecuador, and 5,000 feet higher than Mexico City. Its nearest rival for height is the far distant Lhasa, which stands at an altitude of 12,850 feet. The mean temperature of La Paz is 50 degrees Fahrenheit. But the cold nights are unrelieved by frigid comets, as the folk have nothing to burn, neither coal nor trees in the desolate mountainous regions around the city.
